

StoMachine Technology

Getting it Done... Smarter, Faster

As the innovative world leader in cladding, coating, and restoration systems, Sto goes beyond providing world class products. Sto has long been a pioneer in developing advanced application technologies and equipment to efficiently install our products and ensure the highest quality applications.

Through our StoMachine Technology group, Sto is the only company in the US and Canada that provides contractors with a complete package: the product, application equipment, training, service, and support they need to ensure they get the best quality installed product for their money.

StoMachine Technology offers several choices of equipment to meet the specific needs of your business:

- StoSilo System
- Sto All-Purpose Stucco Pump
- Sto M-8 Spray Pump
- Sto S-25 Continuous Mixer
- Sto Power Rasp and StoVac

Maximize Your Bottom Line with StoMachine Technology

Sto is committed to helping contractors maximize their business potential. By developing advanced application technologies that are designed to work with Sto products, and providing unmatched levels of field support and training for both the product and the equipment, StoMachine Technology enables contractors to do more work, faster, without compromising quality.

Contact your local distributor for more information.

Get the right equipment for the job:

StoSilo System:

This unique system provides storage, mixing and pumping all in one self-contained unit. It is totally automated and can be remotely controlled at the point of delivery, adding convenience, enhancing productivity and reducing waste.

Sto All Purpose Stucco Pump:

Flexible, easy to use, and portable, this pump can spray anything from EIFS base coats to stuccos to finishes, at distances up to 210 feet making it the only pump you need on the job.

Sto M-8 Spray Pump:

Increase your productivity with this lightweight, portable spray pump that reduces the labor required to apply basecoats, adhesives, primers, coatings and finishes on both interior and exterior applications.

Sto S-25 Continuous Mixer:

Eliminate the hassles of bucket-mixing. This portable mixer can be used with the Sto M-8 Spray Pump or the Sto All Purpose Stucco Pump to provide a continuous supply of material. It is easy to load, provides a consistent product mix, and reduces jobsite waste.

Sto Power Rasp and StoVac:

Simplify the process of rasping EPS. Two counter-rotating disks and an adjustable rasp depth deliver smoother, flatter surfaces than manual rasps. The vacuum attachment enables easy pick-up of EPS waste, critical in some applications.
